

# INSTALLATION INSTRUCTIONS FOR ROUND BALE PERFORMER HAY TARPS

**THOUGH THIS OPERATION CAN BE PERFORMED ALONE, IT IS RECOMMENDED TO HAVE AT LEAST ONE ADDITIONAL PERSON FOR INSTALLATION**  
 (KIT CONTAINS: (20) 28' ROPES, (36) 2' ROPES, AND (36) SUPER CINCHES)

- 1 REMOVE YOUR PERFORMER FROM THE BOX AND PULL OUT THE BUNDLE OF ROPES.
- 2 TIE A KNOT IN THE CENTER OF EACH ROPE AS A GUIDE TO SET THE CENTER ROUND BALE ON.
- 3 LAY OUT THE ROPES ON THE GROUND STARTING THE FIRST ONE 8" BACK FROM THE END OF THE STACK (TO ATTACH THE END DRAW STRINGS TO). THE SECOND ROPE SHOULD BE APPROXIMATELY 12" FROM THE END OF THE STACK AND AT 4' INTERVALS THEREAFTER. AT THE END OF THE TARP ADD ANOTHER EXTRA ROPE TO TIE THE END DRAW STRINGS TO.
- 4 THE HAY TARP HAS A CENTER TAB PROTRUDING OUT TO PUT AT THE END OF THE TOP CENTER BALE. THE TARP SHOULD BE INSTALLED WITH THE WHITE SIDE UP.
- 5 INSERT THE LONG ROPE THROUGH THE BACK OF THE SUPER CINCH AND PULL DOWN AS HARD AS YOU CAN TO TIGHTEN. FIRST BOTH ENDS OF THE TARP, THEN THE MIDDLE AND THEN THE REST. GO BACK AROUND THE STACK PULLING SIDWAYS ON THE ROPES TO PULL OUT ANY SLACK IN THE ROPE FROM UNDER THE BALES AND RETIGHTEN THEM. IF YOU'RE SUPER CINCH NEEDS TO BE TIGHTENED (ONLY TIGHTEN 12" MAX). A PROPERLY TIGHTENED TARP WILL HAVE ROPES THAT "TWANG" LIKE A GUITAR STRING. 150LBS. OR MORE OF TIE-DOWN PRESSURE IS RECOMMENDED.
- 6 CHECK AND RETIGHTEN YOUR TARP AS NEEDED. END TABS ON THE TARPS DO NOT USUALLY NEED TO BE TIED IF THE SIDES ARE TIGHTENED ENOUGH.
- 7 INSTALLING SHORTER COVERS ARE BETTER THAN ONE LONGER COVER. THIS MAKES INSTALLATION EASIER AND ALLOWS PART OF THE STACK TO BE UNCOVERED FOR HAY REMOVAL. WHEN REMOVING TARPS ROLL THEM UP PROPERLY AND STORE AWAY FROM RODENTS. THE POLY ROPES CAN BE GATHERED AND USED AGAIN IF NOT DAMAGED.
- 8 WHEN REMOVING A FEW BALES OF HAY, FOLD THE TARP BACK ON TO THE FULLY TARPED HAY AND RETIGHTEN.

**! WARNING: IT IS DANGEROUS TO INSTALL HAY TARPS ON WINDY DAYS !**
