

Premium Quality - Built to Last

Inland Tarp & Liner, LLC (ITL) has provided another customer solution and adds another project to its growing capabilities.

ITL, in conjunction with their customer, Envirotech, recently completed an 831,500 gallon above ground tank for the storage of chlorides for dust control.

The above ground tank (114' diameter x 11' tall) was custom engineered by Westeel for products with a specific gravity requirements exceeding 1.4 and sustained wind loading of 90 MPH to protect against the harsh North Dakota conditions.

ITL in conjunction with one of our service companies, Western Tank and Liner, provided a turnkey installation of the tank, secondary liner with monitoring, primary liner and floating cover manufactured with reinforced Polypropylenes.

Tank erection, liner and cover installation took 8 days with crews from ITL, Envirotech and a supervisor from White Water to oversee the tank construction.

ITL's experience with tank liners and floating covers to both the Oil & Gas and industrial markets provided valuable insight for this customer and the installation was a great success.
