Custom Geomembrane Fabrication Center Opens Odessa, Texas

Inland Tarp & Liner (ITL™), LLC announces the opening of its latest Fabrication & Distribution Center in Odessa, Texas.

Located on Interstate 20 W in Ector County, the Odessa Center produces custom fabricated geomembranes and geotextiles to supply a diverse regional customer base in the energy, construction, industrial, environmental, recreational and agricultural sectors.

In the past 35 years, ITL™ has evolved from a west coast hay tarp manufacturer and service company to one of the largest U.S. custom fabricators of premium quality polyethylene and vinyl products.

Custom liners are produced in a factory controlled environment with rigid QA/QC procedures. Based on project specifications, liners are custom fabricated into one-piece or into large panels. Fabricated liners provide higher quality products and save time and expenses in comparison to the labor costs of sewing or welding in the field and reduce time for liner deployment and installation.

The Odessa Center offers a variety of liner products: Coated Woven Polyethylene (CWPE); Lineal Low Density Polyethylene (LLDPE); High Density Polyethylene (HDPE); String Reinforced Polyethylene (RPE); String Reinforced Polypropylene (RPP); XR Series; and non-woven geotextiles.

As part of its Advanced Containment Solutions™ program, ITL™ works closely with customers in selecting the correct liner material by project application, develops turnkey systems for secondary containment solutions utilizing multiple height engineered walls, soil erosion products, offer customers AutoCAD resources, and provides complimentary customer Training Sessions for welding, equipment maintenance, liner deployment and installation.

As an operating strategy, ITL™ Regional Centers provide customers with enhanced excellence in customer service with rapid order turnaround and delivery.
